

Content Management System (CMS) Service – SV04

Description

This service provides a Content Management System (CMS) platform to create websites.

Features

The content management platform offers scope for:

- Users to manage their roles and permissions
- Using or creating themes
- Creating or adding modules
- Creating forms and views
- Creating panels to bring together different content on a single page

Platform

- Drupal (at least version n-1)

Additional conditions

- The sites are developed by the member's local help desk. The member specifies the URL syntax in consultation with ICT Chancellery.
- Each site's user group will set up the site itself and will support administrators, managers and end users.
- Knowledge of Drupal, site management and web content management is required.

Data backup

- The databases are kept for one month.
- A backup copy is made on a separate medium.

Data security

The owner of the data remains the sole owner; the Chancellery's ICT Department is only an operator.
